

Simpson's paradox (score-stratified, n = 5,780):
Low (<4.5): 0.0% vs 0.0% = 0.0 pp
Borderline: 7.5% vs 4.7% = +2.9 pp
Mid (5.5-6.5): 50.0% vs 54.7% = -4.7 pp
High (>6.5): 94.9% vs 94.8% = +0.1 pp
Aggregate lift is a composition effect.
